

Top 5 AI Tools of the week :

These are some new tools
that are super helpful.

What is Griptape?

Griptape is a modular open source framework that allows developers to build and deploy LLM-based agents, pipelines, and workflows. Its composability makes it ideal for creating conversational and event-driven AI apps that can access and manipulate data safely and reliably.

Griptape

Enterprise Middleware for AI Applications

With contributions from AWS, Dell, Snap, and Daimler, Griptape's enterprise-first focus has been paying off.

- ✓ minimizes prompt engineering in place of a modular and composable Python interface.
- ✓ keeps your data off-prompt by default, so that you can connect data of any size to LLMs securely and reliably.
- ✓ is built to be both cloud and model-agnostic.

Generative AI with Guardrails for Enterprise Analytics

The screenshot displays the ChatAible platform. On the left, a sidebar titled "Exploring what Impacts Successful Sale" shows a list of AI-generated insights. One insight discusses the impact of the day of the week on successful sales, mentioning a significant difference between Thursdays (19.1%) and Sundays (5.6%). Another insight relates Credit Score to successful sales, noting a high explanatory value for Credit Score >350-700 (24.75%). A third insight suggests targeting 21-25 year olds to increase sales. On the right, a main panel titled "Day of Week when Annual Income Bucket is >120k" presents a bar chart showing the percentage of successful sales by day of the week for those with an annual income bucket of >120k. The chart shows Saturday at approximately 80% and Sunday at approximately 75%. Below the chart is a circular "Explainability Value" diagram.

ChatAible

It is the only generative AI for enterprise analytics with built-in guardrails.

Built on Aible's fully automated AI-first approach, ChatAible enables business users to quickly analyze 1000's of datasets across millions of variable combinations and explain business insights.

```

New Relic Grok

The world's first generative AI assistant for observability by New Relic.

Combining OpenAI's large language models (LLMs) and the New Relic unified telemetry data platform, New Relic Grok unlocks the power of observability for all. By simply chatting with New Relic Grok in plain, everyday language, any engineer can gain insights from tons of complex telemetry data, find root causes, fix issues, set alerts, manage users, and more.
